

# HOW TO Activate License?

You might be asked for “License Activation” after installation on some pages, so you need to submit your Rocket LMS Plugins Bundle license in [CRM](#) to activate your license.

Make sure to enter the exact domain where you plan to install the product. If the domain you register does not match the actual domain of your website, your license will not be activated.

Once you've registered your license in the CRM, go to your website's admin panel, navigate to the “Licenses” menu, and register Rocket LMS Plugins Bundle license there. This step is required to unlock access to all pages and features of Rocket LMS Plugins Bundle.

**Note:** the domain used in the website license registration must exactly match the one you entered in the CRM system.
